INTRODUCTION CRYPTOCURRENCY

The world is changing. From instant fund transfers to decentralisation to fraud and identity theft protection, the world of crypto looks as if it's going to overhaul entire industries and businesses on a global scale. The question people ask is: is it good? And if it is good – for whom is it good?

Those in favour of cryptocurrency point to the many advantages of crypto coins, as well as of Blockchain technology: digital currency, instant transfer, decentralised applications, transparency, etc.

Those against cryptocurrency point to its shady origins, lack of regulations resulting in far too many crypto coins (nearly 2,000), ICOs that can be scams, and so forth. Certainly, the crypto world seriously disrupted businesses in more ways than Satoshi Nakamoto could have imagined, when he created Bitcoin, back in 2008.

INTRODUCTION CASHNETT TOKEN

CASHNETT TOKEN is an open source decentralized peer to peer Digital crypto currency, CASHNETT TOKEN is made far ECONOMIC DEVELOPMENT

CASHNET TOKEN blockchain platform is a unique, decentralized, robust, and secure platform for ECONOMIC DEVELOPMENT. It aims to provide a completely secure database which cannot be hacked or misused by anyone around the world. There are many advantages to people by using our platform. CASHNET TOKEN however, is a full node, meaning it helps verify and transmit other CASHNET TOKEN transactions across the network and stores a copy of the entire blockchain.

CASHNET TOKEN was created june/2021 and it will be launch october 2021 CASHNET TOKEN is a deflationary token with a maximum circulating supply of 60 quadrillion.

TOTAL SUPPLY 60,000,000,000,000,000

PRIVATE SALE - 20%

PRE-SALE- 20

ICO 10%

AIRDROP 10%

Development/ Marketing Funds 20%

Luck 20%

TOKENOMICS

CASHNET is a decentralised token on the smart chain (BSC) blockchain BEP20, circulating supply of 60 quadrillion at launch. BEP20 was launched with an initial 60 quadrillion tokens LUCK the 20% of circulating supply, after pre-sale all the unsold token will be burned.

All the unsold of the pre-sale amount of the token supply will be burned immediately after pre-sale close because the contracts of the BSC are based on the foundational deflationary mechanism.

CASHNETT IS FULLY DECENTRALISED. and all communications, developments, and marketing campaigns are planned and performed by members of the community.

HOW IT WORKS

CASHNET TOKEN blockchain platform is a unique, decentralized, robust, and secure platform for ECONOMIC DEVELOPMENT. It aims to provide a completely secure database which cannot be hacked or misused by anyone around the world. There are many advantages to people by using our platform. CASHNET TOKEN however, is a full node, meaning it helps verify and transmit other CASHNET TOKEN transactions across the network and stores a copy of the entire blockchain.

CASHNETT has planned to advance further into the cryptocurrency space by releasing innovative products, such as creating our own blockchain CASHNETT token will create their own COIN that's CASHNETT COIN and decentralized and centralized exchanges, non fungible tokens. The sustainability of CASHNETT is of utmost importance to the community leaders.

STAKING

What's Staking?

Staking is an alternative consensus mechanism – a way to verify and secure transactions – that allows users to generally secure **crypto** networks with minimal energy consumption and setup," Marchesoni says. She says each **staking** wallet is like a different bank account that earns interest and supports the network

Staking is almost as **profitable** as the mining or trading of cryptos, and it comes without risk. All you will need to do is to stake (buy and hold) some CASHNETT token to get added to the mining pool. For the case of **profits**, the real gains you can get from **staking** are determined by how much you vest and for how long.

What are the rewards of **staking CASHNETT**? You may **earn** up to 15% APR on any **CASHNETT** that you stake as a reward for helping secure the network. CASHNETT2 **staking** rewards are given in accordance to **how much CASHNETT** is validating and what rewards the network is offering over a time period.

GAME CHANGER

How Cryptocurrency can become a game changer in the economic world

The financial world

The rise of cryptocurrency represents a seismic shift in the financial world: since it operates independently of any central financial authority, it represents an avenue which the current financial powers-that-be (such as Wall Street) cannot control. It offers e-commerce businesses and traders a level of autonomy hitherto unavailable. . Using cryptocurrencies will allow vendors not to worry about payment service providers locking out their money for one reason or another.

Realising that cryptocurrencies and Blockchain technology are here to stay, financial institutions are looking to take advantage of them: banks are slowly adapting to blockchain technology, using it to trade derivatives or even cotton. A consortium of banks is backing IBM in its creation of a Blockchain that will be utilised to facilitate international trading; in

Australia, the stock market “down under” will be the world’s first ever blockchain-based stock exchange platform.

VISION

Using CASHNETT eliminates the need of middleman (such as banks), offers more secure, faster transfers, eliminates the possibility of credit card fraud and brings smart contracts, escrow and machine payment contracts capabilities.

The main point of CASHNETT is to fix the problems of traditional currencies by putting the power and responsibility in the currency holders' hands. All of the cryptocurrencies adhere to the 5 properties and 3 functions of money. They each also attempt to solve one or more real-world problems. And help the community in economic situations.
