Registration Feedback:

- I've just created user with name "test999" and filled all details of registration. On last submit click it took 3 minutes to register the user. Is there anything wrong?

- I've uploaded 1.95 MB image for profile pic during registration. it should compress near about 200-300 KB to make front-end loading faster. Allow only JPG/PNG file format.

Update Password:

- It's showing server error when i update the password.

About Me Section:

- Below options should be allow to update. It should be update in appropriate field of database.

About Me:

- Profile image

- first name Last name

- Type of artist

- Bio

- Email and password change option

- CV upload (highlight in design)

For Example 1 - BIO: when we update bio from about me section then it should be also update to the main bio section available in dashboard

For Example 2 - First & Last Name: When we update first and last name from about section then it should be updated to the CONTACT DETAIL section.
